

Professional Summary

Software Engineer with 4+ years of experience building cloud-native backend platforms, distributed microservices, and AI-assisted enterprise applications. Experienced in designing scalable APIs, event-driven architecture, and Kubernetes-based services using Java, Spring Boot, Python, AWS, Docker, and Kafka. Recently focused on developing AI-powered developer tooling, MCP servers, LLM workflows, and intelligent automation solutions that improve production incident analysis, operational efficiency, and developer productivity. Passionate about building reliable, observable, and secure backend systems that power AI-native enterprise applications.

Technical Skills

Langua	Java, Python, JavaScript, SQL, HTML5, CSS3, TypeScript
Backend Technologies	Spring Boot, Spring Framework, Spring Cloud, Microservices, REST APIs, GraphQL, JDBC, JMS, Servlets, EJB, JPA, Hibernate, Apache CXF, SOAP
Software, Packages and API	Git, GitLab, GitHub, BitBucket, Docker, Jira,Rally Postman,RabbitMQ, Apache Kafka, JMS, Zookeeper
Databases	Oracle, PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, PL/SQL
Methodologies	Object Oriented Programming, Agile,
Cloud & DevOps	AWS (EC2, Lambda, S3, Amplify, EventBridge, Step Functions, DynamoDB), Microsoft Azure, Google Cloud Platform (Cloud Run, Cloud Storage, Pub/Sub), Docker, Kubernetes, Jenkins, CI/CD Pipeline
Monitoring & Logging	OpenSearch, Log4J, CloudWatch, Dynatrace Spring Boot Actuator
Java/J2EE Technologies	Java, Servlets JDBC, JNDI, JMS, JSTL, Java Beans, Java Multithreading, Generics and Collections
Testing & Quality	JUnit, Mockito, PowerMock, Cucumber (BDD), Postman, API Testing, Functional Testing, Integration Testing, Regression Testing, Performance Testing, Test Automation

Education

Master of Science in Computer ScienceJan 2023 – May 2024

University of Central Missouri, Lee Summit, Missouri

Grade:3.8

Work Experience

Client: Dish Network –Denver, Colorado. February2025– Present

Role: Software Engineer

- Developed and maintained scalable backend microservices and REST APIs using Java, Spring Boot, AWS (Lambda, Step Functions, Event Bridge), and DynamoDB, enabling real-time order orchestration, customer workflows, and event-driven processing while improving order status latency by 30%.
- Architected Kubernetes-based distributed services utilizing Docker, OpenSearch, vector embeddings, and event-driven messaging to power intelligent search, anomaly detection, and real-time customer order insights.
- Designed and developed AI-powered MCP servers, autonomous agents, and LLM-driven workflows using Amazon Kiro that automated production incident investigation, log analysis, and contextual debugging across distributed microservices, significantly reducing manual troubleshooting effort.
- Created dynamic test MCP server for automated order placement and validation, integrated with AI clients reducing QA engineer dependency. Built an AI-powered internal dashboard using next.js and AWS bedrock LLMs, enabling telecom support teams at Boost Mobile to query order flows and fallout analysis in natural language, improving resolution times by 40%
- Led an end-to-end development of pSIM suppression feature for eSIM activations, saving \$1M+ in logistics costs in its first quarter.
- Designed and implemented the complete implementation of Narvar shipment tracking for Boost Mobile, designing and developing Spring Boot microservices, REST APIs, and Kafka-based event-driven integrations with internal order management systems to deliver real-time shipment visibility for over 1M+ annual customer orders and automated

customer tracking updates, this improved shipment visibility by 100%, and reducing customer support inquiries by 35%

- Participated in application design discussions, feasibility analysis, and technical estimation for new features, collaborating with product owners to deliver scalable backend solutions.
- Integrated SonarQube and Jenkins into CI/CD pipelines to automate code quality analysis, unit testing, and secure code validation prior to production deployments.
- Developed highly available, event-driven microservices capable of supporting enterprise-scale customer transactions using Kafka, RabbitMQ, and AWS cloud services.
- Collaborated with product managers, frontend developers, QA engineers, and DevOps teams throughout the SDLC to design, develop, review, deploy, monitor, and support production-ready features using Agile methodologies while ensuring code quality and maintainability.
- Owned end-to-end feature delivery from requirements gathering through production release, continuously optimizing backend architecture, API performance, cloud infrastructure, and operational workflows across AWS-based distributed systems.

Client: Cisco –REMOTE Overland Park, Kansas.

July2024– January2025

Role: Engineer I

- Built scalable backend services and 20 + production REST APIs using Java, Spring Boot, Spring Security, Kafka, RabbitMQ, PostgreSQL, and AWS, enabling secure enterprise integrations and event-driven communication.
- Designed and implemented secure, event-driven microservices using Spring Boot, Spring Security, JWT, OAuth2, Kafka, JMS, RabbitMQ, AWS Lambda, DynamoDB Streams, OpenSearch, Spring Cloud Config, and REST APIs, enabling seamless system integration, real-time communication, and high-performance search capabilities.
- Built cloud-native applications leveraging AWS, Kubernetes, PostgreSQL, Hibernate, JPA, AWS RDS, Docker, Maven, Jenkins, GitHub, and CI/CD pipelines while improving scalability, high availability, deployment automation, database performance, backup, and disaster recovery processes.
- Optimized legacy financial applications by refactoring Oracle PL/SQL code, developing stored procedures, cursors, complex SQL queries, joins, subqueries, and CTEs, improving data processing, reporting efficiency by 25%, and supporting data-driven business decisions.
- Worked in Linux/UNIX environments to deploy, troubleshoot, monitor, and support Java microservices in production.
- Partnered with operations teams during production incidents, root cause analysis, and application support to ensure high system availability
- Supported cloud-native deployments using Docker, Kubernetes, and Prometheus while participating in code reviews, documenting backend systems, and mentoring junior engineers through technical guidance and Azure-focused knowledge-sharing sessions, ensuring high code quality, operational excellence, and team growth
- Practiced Agile and Test-Driven Development (TDD) using JUnit, Mockito, Jenkins, and automated testing frameworks to ensure high code quality, reliability, maintainability, and end-to-end delivery of scalable enterprise applications from design through production support.

TATA CONSULTANCY SERVICES –Hyderabad, India.

January 2021– December2022

Client: State Street Bank and Trust

Role: Assistant Systems Engineer

- Developed scalable enterprise applications and microservices using Java, Spring Boot, Spring Framework (IOC, DI, AOP, Security), Spring Cloud, REST APIs, Hibernate, JPA, and SOA technologies, improving application scalability by 60% and reducing deployment time by 35%.
- Designed cloud-native solutions leveraging AWS, Cloud Foundry, Docker, Netflix Eureka, Spring Ribbon, Spring Hystrix, Kafka, Zookeeper, RabbitMQ, and Spring Boot Actuator to deliver resilient, fault-tolerant, and highly available distributed systems.
- Implemented secure and scalable backend services using Spring Security (JWT, OAuth2), Kafka, REST APIs while integrating third-party systems, ensuring secure data exchange, interoperability, and reliable communication across enterprise systems.
- Designed and maintained PostgreSQL databases and data access layers using Hibernate, JPA, and ORM frameworks, while ensuring data integrity through backup and disaster recovery (AWS RDS, pgAdmin) and maintaining high code quality using TDD (JUnit, Mockito) within CI/CD pipelines (Jenkins) in Agile environments.
- Collaborated in Agile teams to modernize monolithic applications into microservices, implemented comprehensive logging with Log4J, monitored application performance using Google Analytics and Amplitude, authored complex SQL/PLSQL scripts, and delivered secure, maintainable, production-ready software with extensive code reviews and continuous integration.
